Die Braunvieh ras is een van die mees onderskatte rasse in Suid-Afrika; tog is dit die “alles in een” ras. Dit is een van die oudste beesrasse ter wêreld en het ongeveer 100 jaar gelede sy verskyning in Suid- Afrika gemaak; toe bekend as die *Bruin Switser*. Sedert 1996 verander die naam na BRAUNVIEH SA om 'n duidelike onderskeid tussen die dubbeldoel en Suiwel Switsers te tref. Dit is ook die naam wat internasionaal gebruik word vir dié dubbeldoel Bruin Bees.

Braunvieh is 'n medium / grootraam dubbeldoel bees wat meer konsentreer op vleiseienskappe, maar wat al die dubbeldoel eienskappe het.

Braunvieh word baie suksesvol in kruisprogramme gebruik a.g.v. goeie moedereienskappe, melk, temperament, aanpasbaarheid en uitnemende groeivermoë. Suiwer- en kruiskalwers word al meer gewild in voerkrale weens die ras se vermoë om 'n swaarder karkasse te lewer met die regte vet bedekking. Uit 'n onlangse verslag van S.A. Stamboek blyk dit dat Braunvieh bulle wat die Fase C groeitoets voltooi het, besonder goed gevaar het in vergelyking met ander rasse.

Jy kan nie die speenkalfprys verander nie, maar jy kan wel jou speengewig verander! Maak dus die die BRAUNVIEH deel van u toekomsplanne!

The Braunvieh breed is one of the most underestimated breeds in South Africa, it is however the “all-in-one breed”. It is one of the oldest pure bred cattle breeds in the world and made its appearance in South Africa more than a hundred years ago, then known as the *Brown Swiss*. In 1996 the name changed to BRAUNVIEH SA to make a clear difference between the dual purpose section and the Dairy Swiss. Braunvieh is also the name that is used internationally for the dual purpose Brown Cattle.

Braunvieh is a medium / large frame cattle breed that focuses more on beef production, but still keeps all the remarkable dual purpose characteristics.

Braunvieh cattle are used very successfully in crossbreeding programs due to their excellent maternal nature, milk production, adaptability and phenomenal growth rate. Pure and crossbred calves are very popular in feedlots due to the breed's ability to produce heavier carcasses with the desired fat coverage. From a recent report, produced by SA Studbook, Braunvieh bulls undergoing the Phase C growth test, outperformed most of the breeds.

You can't do much about the weaner price, but you can improve on weaner mass! An excellent reason to make BRAUNVIEH part of your future plans!
